OCEANS AND PONDS

K-2

OBJECTIVES

At the end of this lesson, the students shall be able to do the following:

- Identify, orally or in writing, some animals that have an aquatic habitat;
- Classify, orally or in writing, animals according to the type of aquatic habitat; and
- Give an oral or written definition of the new terms: aquatic and habitat.

SUBJECTS:

Science, Art

TIME:

2 one hour sessions

MATERIALS:

index cards
chart paper
tape
blackline master,
Water-Fresh-Salt
blackline master, Water Habitats

BACKGROUND INFORMATION

Animals must have a home that provides all their needs: the right amount of water, the right kind of food, and the right temperature. A home that provides all these things is called a habitat.

There are many different habitats on Earth. Ponds and oceans are examples of aquatic habitats. An ocean is a salt water habitat. A pond is a fresh water habitat.

Terms

aquatic: living or growing in or on water.

habitat: the place or type of site where a plant or animal naturally or normally lives and grows.

ADVANCE PREPARATION

A. Make two charts with the following titles:

Water Animals Fresh Water/Salt Water (make 2 columns) B. Copy the blackline masters:

Water-Fresh-Salt Water Habitats

- Prepare mural background.
- D. Cut two large pieces of blue bulletin board paper. Cut one piece in the shape of a pond and the other wavy like the ocean. Label: Ocean - Salt Water, Pond - Fresh Water.

PROCEDURE

- Setting the stage
 - A. Ask each student to name an animal that lives in water.
 - B. Write the name of the animal on an index card and give it to the student. Have each student to tape his/her card on the Water Animals chart.

II. Activities

- A. Pass out the Water-Fresh-Salt worksheet (blackline master included).
 - Go over the Water Animals Chart having the students classify each animal's aquatic
 habitat as fresh water or salt water by writing the name of the animal in the appropriate
 column.
- B. Display the ocean and pond murals. Ask each student to draw a picture of the animal he/ she chose. Then cut out the picture and glue it to the pond or ocean mural.

III. Follow-Up

- A. Pass out the Water Habitats worksheet (blackline master included). Have students cut out the animal pictures and glue each one in its proper aquatic habitat.
- B. Make a whale as an example of a salt water mammal. Share why the whale is a mammal and not a fish (instructions included).

IV. Extensions

- A. Have each student choose one animal and write and illustrate a story about how/where the animal gets water.
- B. Make a book titled <u>Animals and Water</u> by stapling the students' stories together and making a cover. Place the book in your classroom library.
- C. Explore other types of animal habitats and create a diorama display of them.

RESOURCE

DeBruin, Jerry, Creative, Hands-On Science Experiences, Good Apple, Inc., Carthage, Illinois, 1980.

SACK WHALE PATTERN

- Spread flat, large paper sack.
- Trace fluke pattern at top of bag and paint sack.
- Cut an X in the bag for the blow hole.
- For the waterspout, roll a piece of 9" x 12" blue construction paper into a cylinder shape. Tape it so it won't unroll.
- Let the students cut on the fluke pattern lines.
- Have the students open bag and stuff with crumpled paper from the recycling bin.
- Staple fluke closed.
- 8. Using markers, let the students make the whale's mouth and eyes.
- Let the students cut the blue construction paper cylinders halfway down all the way around. Cut the fringed strips to represent the waterspout. Insert into X shaped hole.
- Cut two fins from construction paper and glue to the whale's side.
